

Message from Dr. Divya Gairola

Associate professor Applied science department

Lloyd institute of engineering and technology Greater noida

(Founder, Lloyd Eco Club 2024)

The **EcoClub** is not just a space—it is a philosophy. It is where students take ownership of their **nature, community, and country**, cultivating a deep sense of belonging. My vision is to teach Environmental Studies (EVS) through a **spiritual and holistic lens**, reminding us that our surroundings are sacred and interconnected.

Through the EcoClub, we nurture awareness of the **mindful use of resources** and introduce the principles of **sustainability**. Students learn that as future technologists and professionals, every project must begin with sustainable practices. Together, we align our efforts with the **United Nations Sustainable Development Goals (SDGs)**, especially:

- **SDG 3: Good Health & Well-being** – promoting hygiene and clean surroundings.
- **SDG 4: Quality Education** – ensuring equal opportunities and environmental literacy.
- **SDG 6: Clean Water & Sanitation** – encouraging mindful water use and cleanliness drives.
- **SDG 10: Reduced Inequalities** – fostering inclusivity in all activities.
- **SDG 13: Climate Action** – through plantation drives and eco-friendly initiatives.
- **SDG 15: Life on Land** – protecting biodiversity and nurturing green spaces.

Our activities—**plantation, cleanliness drives, hygiene awareness, and equality in education**—are not just tasks, but spiritual acts of service to the planet. By inculcating these habits, students learn that technology and sustainability must walk hand in hand.

At its heart, the EcoClub is a **foundation built by students**, for students, where they contribute, participate, and care for the Earth with empathy and responsibility,

"We're stronger when we move forward together—let's turn this momentum into results."

Happy learning
